**Subject:** Re: for Matthew's school

Dear Joyce,

In contrast to the ERG performed on Matthew in November 2003, which was almost extinguished (a very small a wave was just starting to insinuate), the ERG performed in November 2004 already shows a and b waves with an achromatic stimulus. To me, this indicates a clear improvement, although Matthew's ERG is still very abnormal, and Mathew needs to receive special visual services. I enclose both ERG tracings to show to your ophthalmologist.

Best regards,
